INTRODUCTION

Your new #1617 Pop & Self-Serve Warmer is shipped completely assembled, ready to operate. After removing the corrugated carton from the machine, check thoroughly for any damage which may have occurred in transit. Claims should be filed immediately with the transportation company.

Remove all cardboard packing and tape from the machine. Wipe all exposed surfaces with a damp cloth to remove fingerprints, smears, etc. which may have occurred during unpacking and handling.

ELECTRICAL REQUIREMENTS

Standard voltage for the Pop & Self-Serve Warmer is 120V, 60 cycle, single phase, A.C. current. The unit should be placed on its own 30 Amp (4 wire) electrical circuit. The switches to control the heaters, kettle and lights are located at the top on the inside of the cabinet.

1. Turn kettle heat and kettle motor switch on.
2. Make test pop with 3 kernels of corn and 1 ounce of oil.

4. When corn has popped dump kettle.
5. Repeat steps 3 and 4 for additional batches.

Always pop three to five batches for best results.

CARE AND CLEANING

The aluminum frame of the popcorn machine is easy to keep clean. Usually a damp cloth will remove all dirt and grease spots. NEVER USE ABRASIVES on the aluminum framework. The glass should always be clean and sparkling. Remember the inside of the glass must be cleaned too. Empty the old maid drawer and wipe clean. Remove bottom cabinet pans and clean out any stray debris.
